DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 and 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toyama et al.(4,908,547).

Claims 1 and 11-12, figure 3 discloses a vacuum tube with index stripes(25), phosphor screen(22), electron gun(13), deflection yoke, light window and detector(14), and an index circuit(43) transmitting a signal obtained by synchronizing(40) an index signal with a color signal(41).

While the recited positioning of the light window is not specifically disclosed, from figure 3 it is obvious for the light window to be in the recited range of positions for improved sensing of radiation from the index strips.

3. Claims 2-10 and 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toyama in view of Kuwabara et al. (5,952,767).

While Toyama discloses a plurality of detectors(col. 1, lines 34-38), Toyama does not disclose four detectors.

Claim 2, figure 2 of Kuwabara discloses four light detectors(19) for detecting radiation from index strips.

Claims 3, 7 and 13, the recited positioning is an obvious modification of the position disclosed in Kuwabara.

Claims 4 and 14, Kuwabara discloses 12 funnels(14) and necks(17).

Claim 5, figure 1 of Kuwabara discloses a divided screen.

Claims 6 and 15, figure 2 of Kuwabara discloses four windows(19) on each of four sides of the funnels(14).

Claims 8-10, the recited limitations are well known parameters in the art for a CRT.

Claims 9-10 and 15, the disclosed position of the window in Toyama appears to be in the recited range, or obviously close to it.

It would have been obvious to one of ordinary skill in the art at the time of the invention to position the four detectors disclosed in Kuwabara on the CRT disclosed in Toyama for improved radiation detection.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed.

Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-15 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 14 of U.S. Patent No. 6,400,085 in view of Toyama. As referenced above, figure 3 of Toyama discloses the recited window positioning. All other limitations are recited in the claims of Patent 6,400,085. The motive for combining the two references is for improved sensing of the radiation from the index stripes.
